

3:30pm – 4:15pm

Fueling water innovation in Atlantic Canada

*Panel Organizer: Elizabeth Hendriks
WWF-Canada*

Innovation in Atlantic Canada

The Living Planet Report

The freshwater LPI shows a decline of 83 per cent between 1970 and 2014

Canada mapped by rivers, lakes and streams

**Most
important
resource**

Watershed Reports

The **Freshwater Threats Assessment (FTA)** works with the **Freshwater Health Assessment (FHA)** to provide a full picture of the health and threats of our freshwater nationally

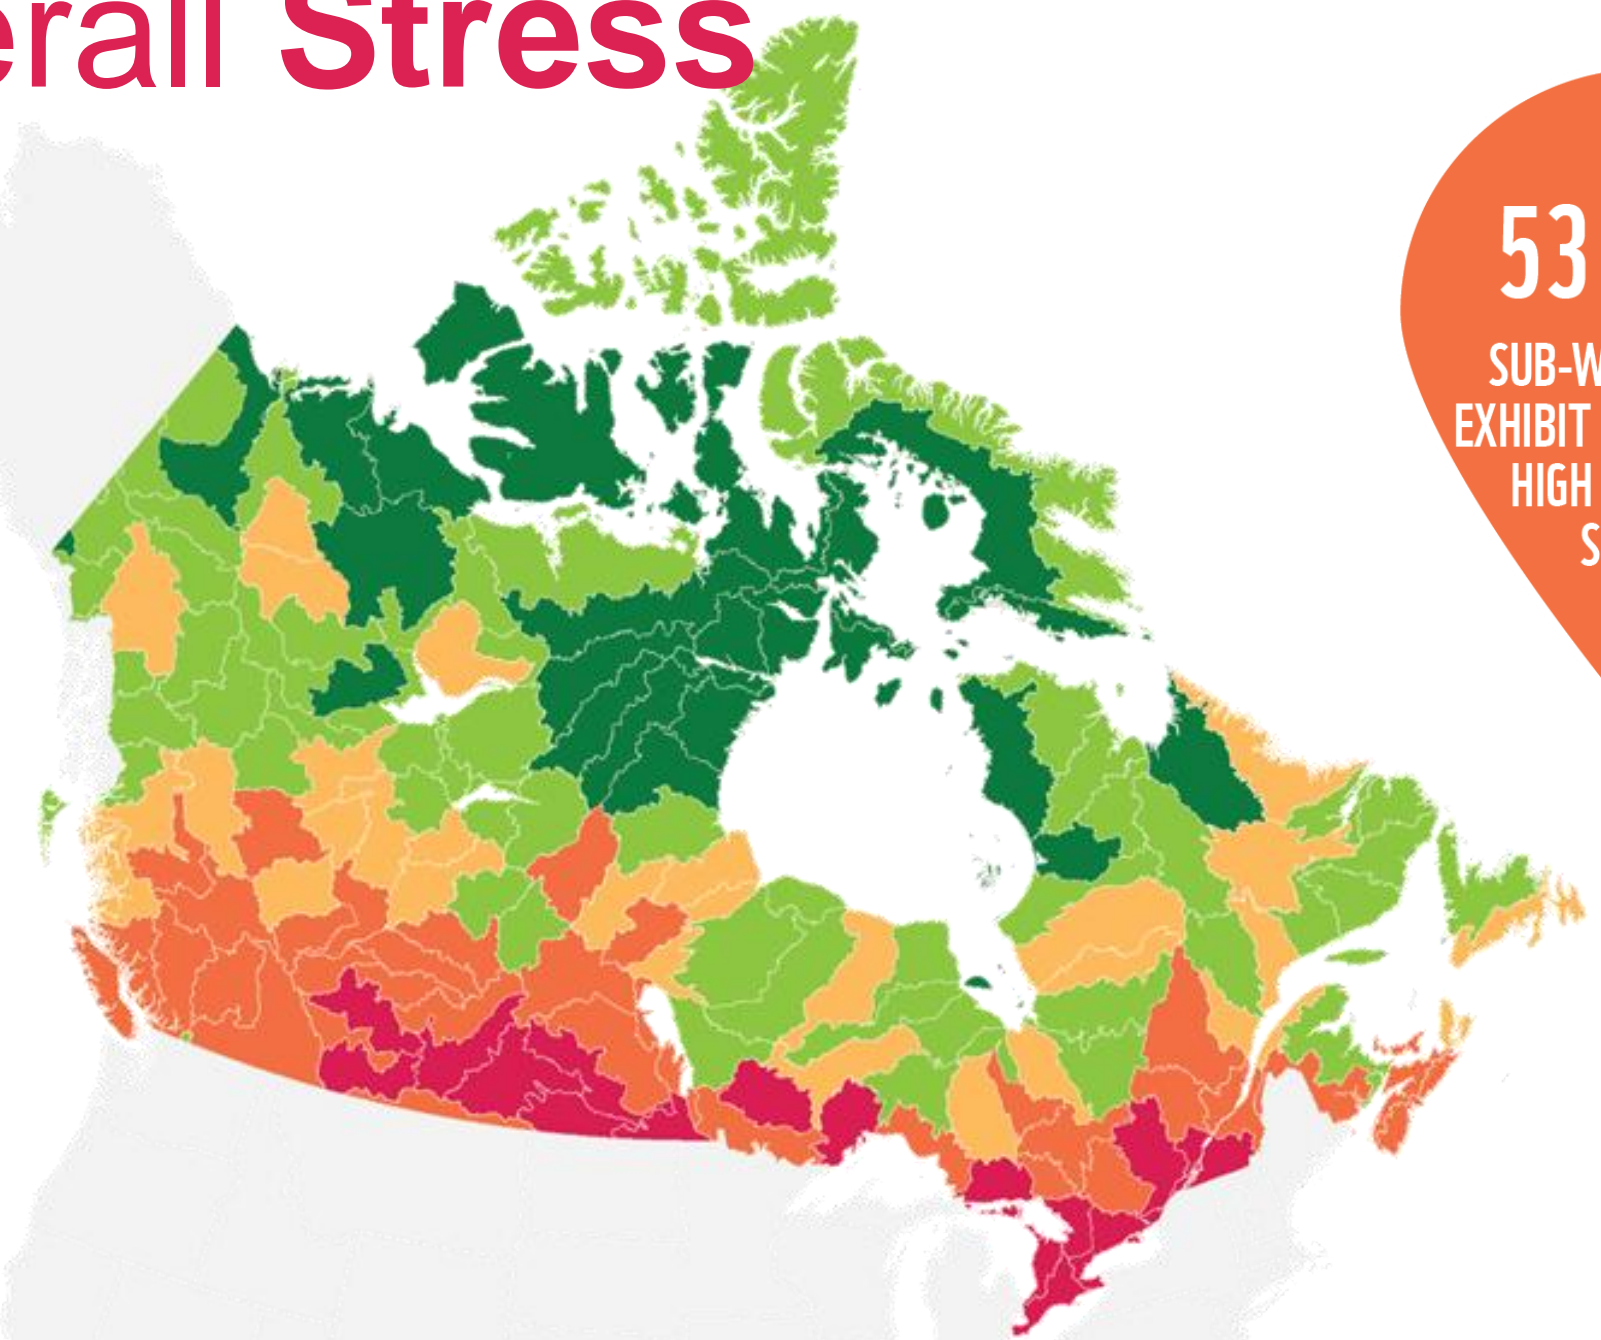

FHA provides the current state and FTA illustrates the influence of human impact on aquatic habitat.

We can then determine “**how**” to fix it through the appropriate course of action – policy, legislation, restoration, etc.

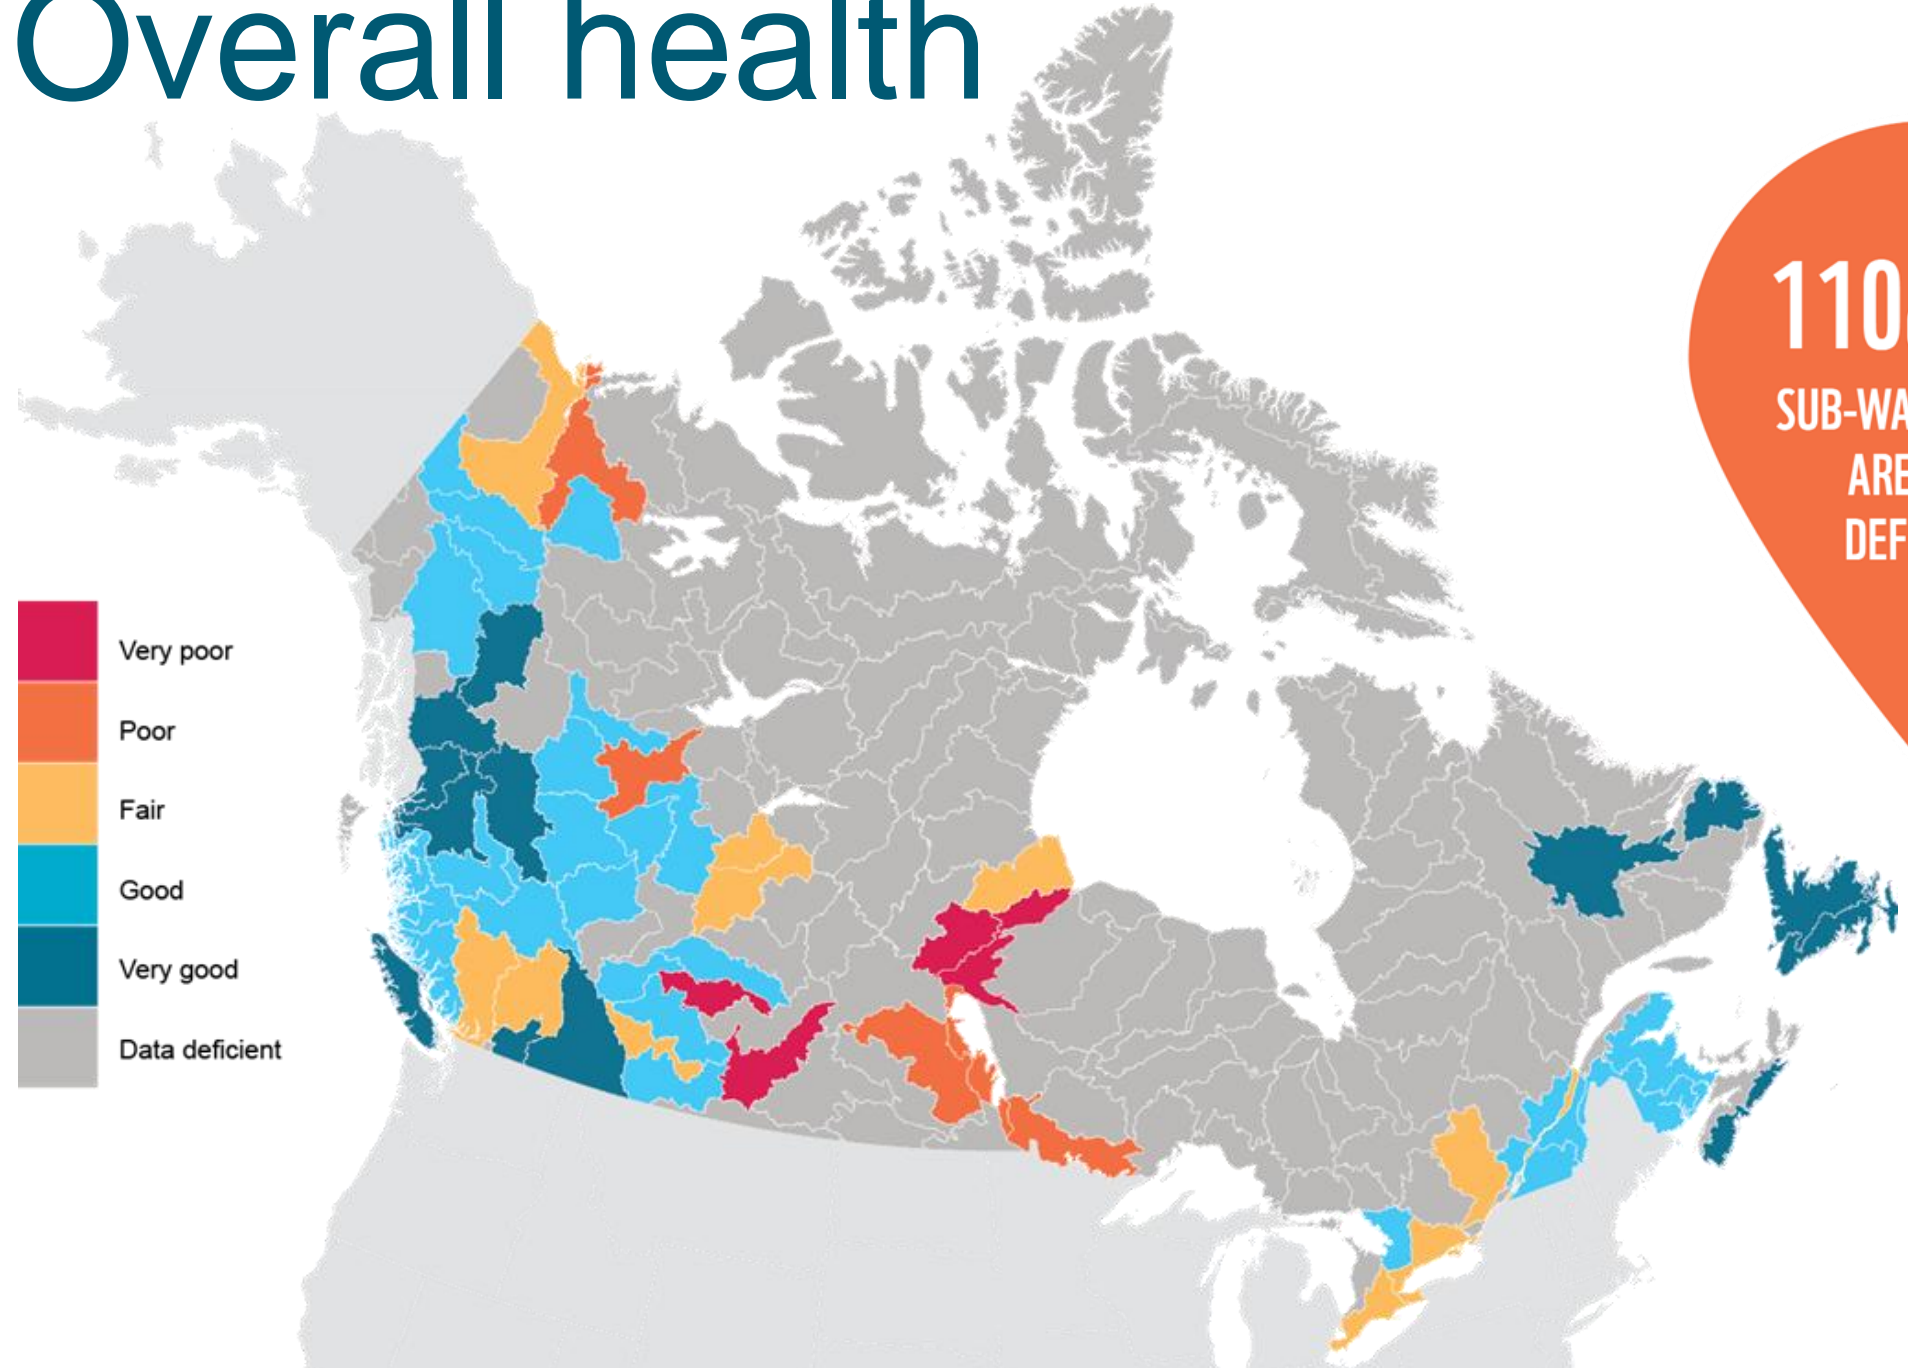

Overall Stress

We have to do better...

From the bottom up-
How NGOs can collect data to influence
policy
(an Atlantic-Canadian Perspective)

PEI Government- Watershed Management Fund provides core funding for watershed groups

Allocation	Amount
Total Envelope	\$1,120,000
Support for Alliance	\$25,000
50% on size	\$547,500
12.5% on leveraging	\$136,875
12.5% on community involvement	\$136,875
25% on performance	\$273,750
Total Funding	\$1,120,000

PEIWA

- Umbrella organization that provides a strong united voice for watershed groups on PEI.
- BOD that meets monthly.
- Full-time Watershed Ecologist.
- Ability to apply for large-scale funding that benefits all PEI Watershed groups.
 - Currently \$2 million grant from the DFO Coastal Restoration Fund for:
 - Training
 - Staff
 - Equipment Purchase
 - Data Management
 - Demonstration projects

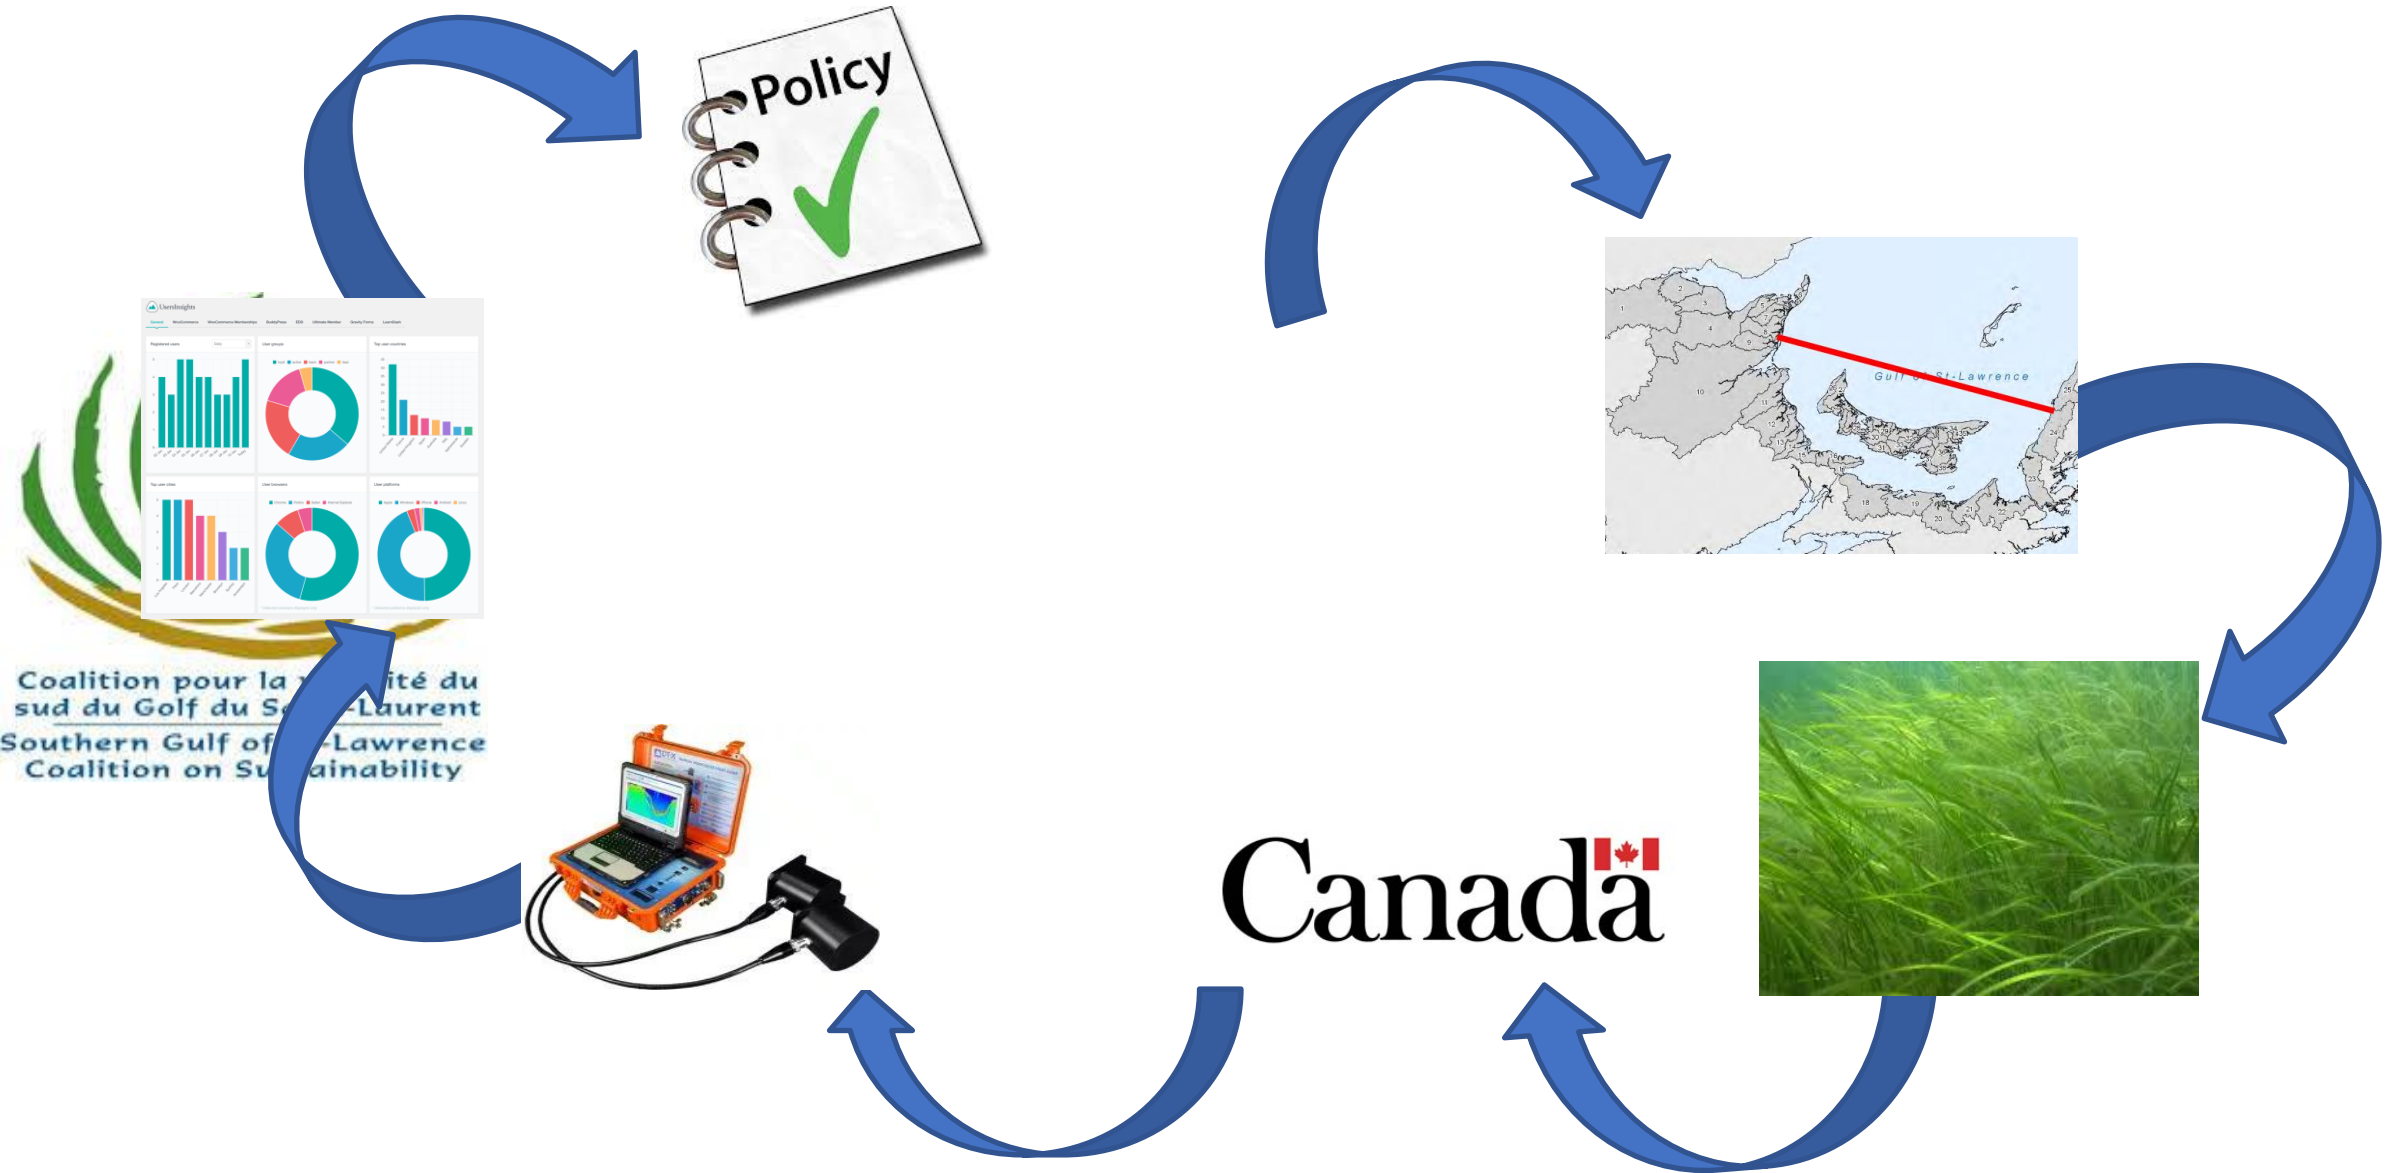

Funding Training, Purchase of Monitoring Equipment & Data Collection

- Core funding provided by Provincial Government allow for the maintenance of highly qualified staff/reduces turnover rate.
- These environmental groups are able to increase their capacity/expand the scope of the work they are doing.
- Government and industry take notice!
- Leads to collaborative working relationships to monitor and address environmental issues.

Context of Community-Based Monitoring in Atlantic Canada

Emma Wattie

Canadian Science & Policy Conference

November 2018

- Regionally Focused
- ~40 Community-Partners
 - Provide Networking opportunities
- Support to CBWM Organizations
 - Equipment
 - Data Management Solutions
- Work with National Partners

CBM in Atlantic Canada

A scenic landscape of a lake or bay with mountains in the background and two people swimming in the water. The sky is blue with scattered white clouds. The mountains are covered in autumn foliage, showing shades of orange, yellow, and green. The water is a deep blue, and two people are visible swimming in the middle ground. The foreground is filled with tall grasses and reeds.

- ~80 active monitoring groups
- Many 20-30 years old
- CBM's Economic Benefit
 - Example ACAP groups

CURA H₂O

Community-Based Water Monitoring and Management

Research project (2011-2016)

Standardization

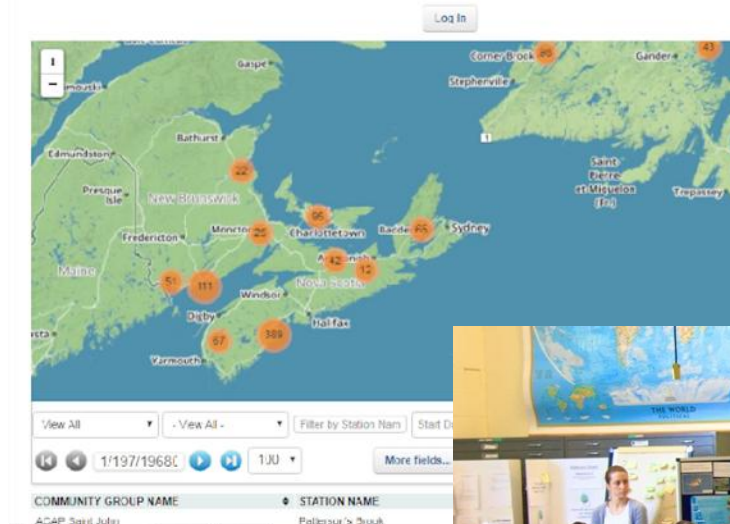

- Training
- Equipment
- Regional water quality dataset

Social Sciences and Humanities
Research Council of Canada

CURA H₂O ended... now what?

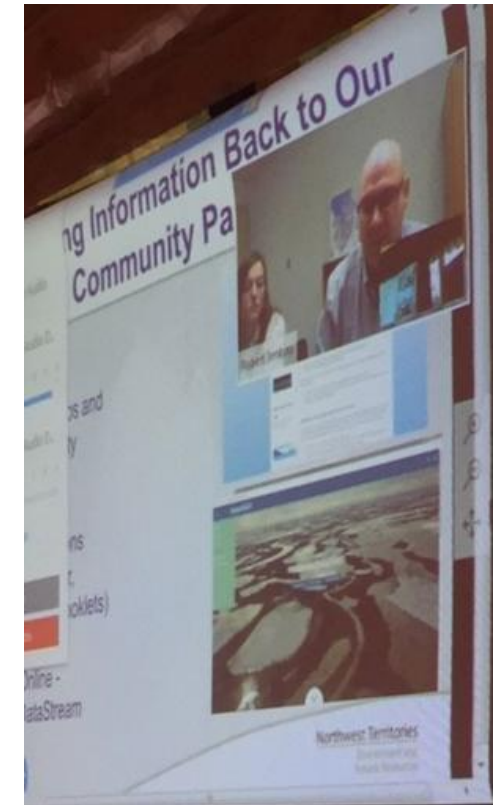

- Started to tackle standardization
- Large dataset
- Network of community-based water monitors

We asked!

Moncton, New Brunswick - January 2017

We Listened!

Atlantic DataStream

A Canadian Heritage River
Hillsborough River Association

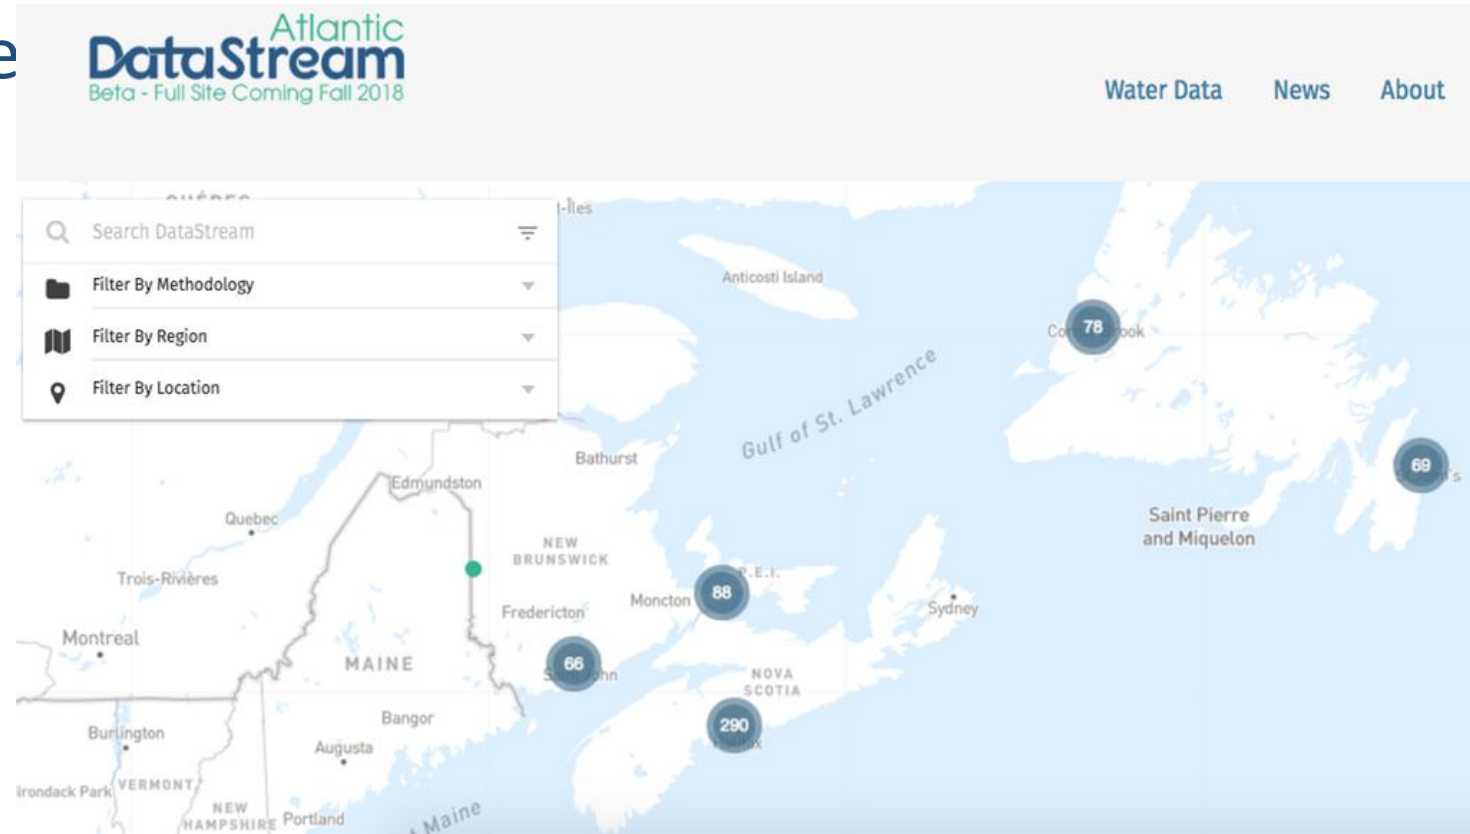

Environment and
Climate Change Canada

Environnement et
Changement climatique Canada

Atlantic DataStream

- Atlantic Ecosystem Initiative funded project (2018-2020)
- AWN community partners' data online!
 - 23 groups online
 - + Environment and Climate Change Canada
- Successful proposals to bring more datasets online

DataStream Kick Off June 2018

Since the Kick Off

Onboarding new groups

Training & Equipment Loans

Perfect Storm

Atlantic
DataStream

- Coordinated effort
- Building towards Atlantic DataStream for some time
- Didn't have the capacity to do it on our own

Thank you!

Community

Communities are connected to their waters and best-placed to see changes as they happen.

Policy & Action

Knowledge can be translated into action to protect the health of watersheds on which we all depend.

Open Data To Knowledge

Open data advances scientific knowledge, supports collaboration, and fuels innovation.

Community

Communities are connected to their waters and best-placed to see changes as they happen.

Policy & Action

Knowledge can be translated into action to protect the health of watersheds on which we all depend.

Open Data To Knowledge

Open data advances scientific knowledge, supports collaboration, and fuels innovation.

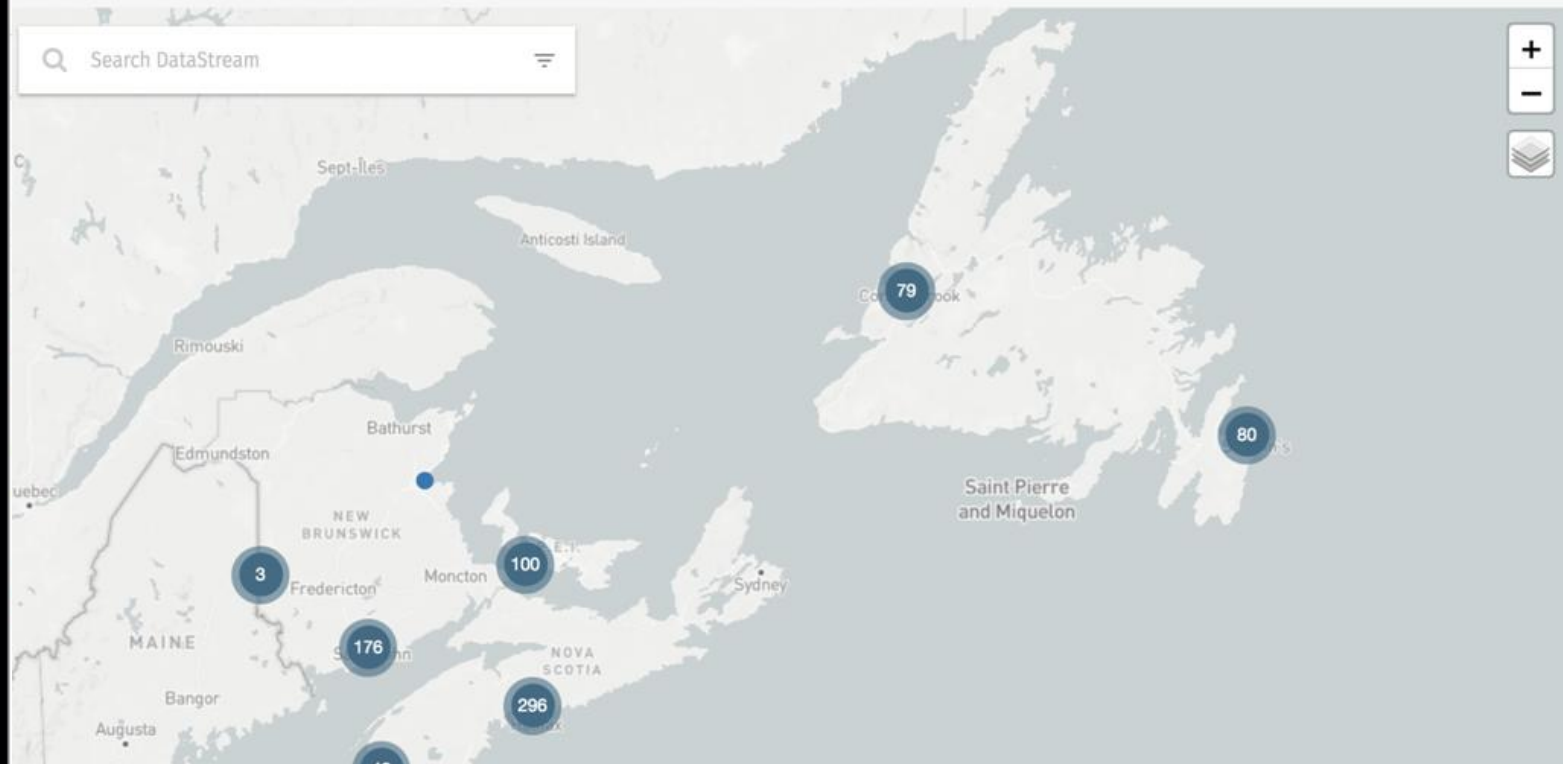

Lack of data sharing infrastructure can limit impacts of water monitoring and research initiatives

Data-Policy Cycle

Where DataStream fits in

Search DataStream

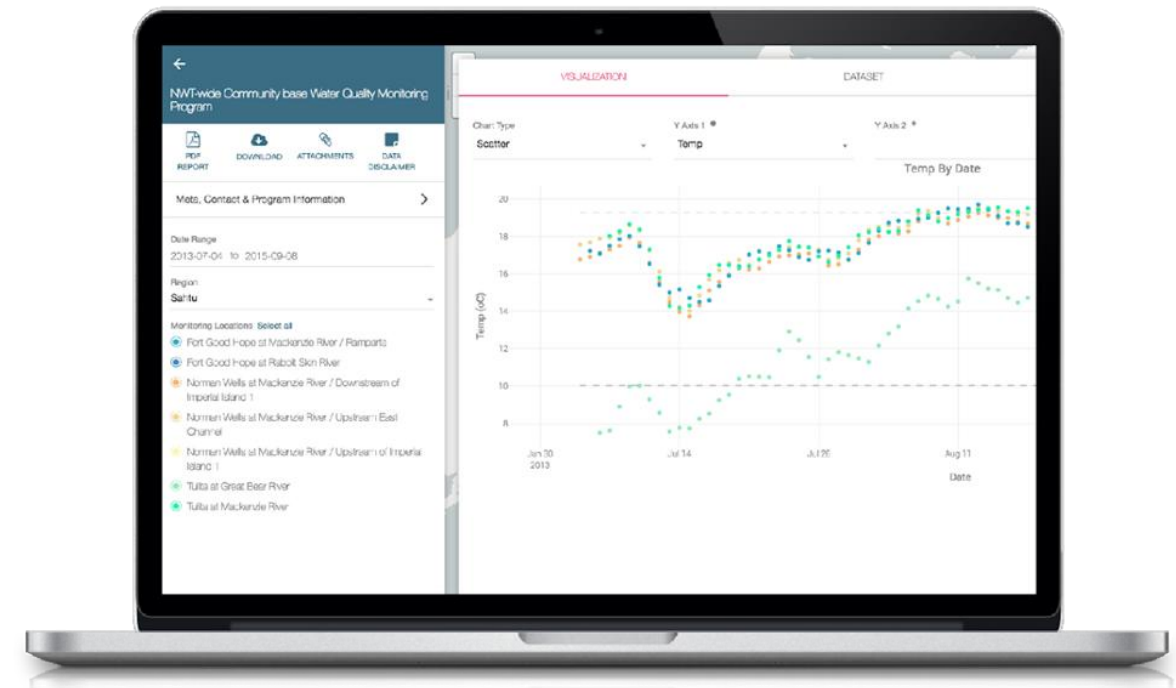

DataStream

What DataStream is?

- Neutral, independently run and free to use
- Open Access
- Clear approach to data ownership and licensing
- Scientifically robust foundation
- User-friendly upload, search and visualization

What DataStream is NOT?

- No direct role in collecting data on the water
- No interpretation or analysis

Continuous, platform-wide improvement

- **Spring releases**
 - Robust, internationally adopted data model (WQX)
 - Focus on story-telling and showcasing on-the-water efforts
- **New this Fall!**
 - Use of blockchain to provide transparent record of changes in datasets over time
- **What's coming?**
 - More data (always)
 - Better, more intuitive search
 - Growth to the Lake Winnipeg Basin

Blockchain and DataStream

Verification of data authenticity

1  Diverse water monitoring initiatives are using DataStream to organize, store, and visualize the water quality data they want to share.

2  When a dataset is uploaded to DataStream, a unique data hash is created. This hash reflects the exact contents of the data file in an encrypted form.

#aBc123dEF456gH7

3 The data hash is submitted and written into the Ethereum Blockchain. The decentralized nature of the blockchain network means this record is permanent, traceable, transparent and secure. 

4  DataStream users can verify that they are accessing the authentic (unaltered) version of the data through a built-in user interface, or independently verify the record on the Ethereum Blockchain network themselves.

VERIFICATION STATUS

-  **Pending** The blockchain verification process is underway.
-  **Verified** The dataset hash matches the one written into the Ethereum Blockchain. The dataset you are accessing is an authentic version.
-  **Unverified** The dataset hash does not match the hash stored on Ethereum Blockchain. This means the data has been altered since the time of upload.
